Next generation video analytics
Bedroq Seek

Bedroq Seek
Maximising surveillance and investigation capabilities

Bedroq Seek gives surveillance and investigation teams advanced capabilities, allowing them to speed up search requests and cut down days of manual searching to a matter of minutes. There are multiple ways to use the solution – Post-processing, live monitoring, and operator-initiated analytics allow for many different scenarios and operational requirements. Bedroq Seek combines best-in-class video analytics software solutions from BriefCam and NEC NeoFace, and incorporates them into one simple to use managed service.

UK Police
Here's a quick video to explain more:

Speeding up investigations when time is critical

Bedroq Seek can be integrated with existing surveillance systems and hosted either on-site or in our own UK-based data centre.

This means that the technology can be implemented quickly and securely, and can be scaled up or down based on individual operational requirements. At a time when budgets are under strain, Appearance Search technology can help to free up personnel time, allowing for a more effective deployment of resources and increasing the speed of investigations.

Depending on your requirements, Bedroq Seek can process and analyse 100 hours of video evidence in as little as 1 hour.

Strategy

Consultation & Planning

Bedroq gather full client requirements and conduct detailed site surveys before using our years of experience to design a solution for any environment or scenario. Our detailed planning and testing ensures we're implementing the right technology that works first time.

Delivery

Deployment & Networking

There are a variety of data-hosting options for your Bedroq Seek solution. We'll work with you to decide on the option that will cost-effectively deliver the best outcome for your organisation, whether that's on-premise, public cloud, or hosted in Bedroq's secure private data centres.

24/7

Scalable Hosting

If you have a large scale operation taking place and you require more processing power, we can instantly upscale your resources to handle any requirements

Support

Operational Outcomes

Bedroq includes training for its solutions so that your teams can get up and running quickly, to get the most out of our partnership and technology – saving you money,

you have. We guarantee only security cleared, UK staff will be able to access our Police Approved Secure Facility (PASF) data centres.

improving your reporting, and allowing for better management of your resources.

Securing Energy Assets
How will Bedroq Seek achieve this?

Best in class technology
in a fully-managed package

Bedroq Seek is more than just software. It's a scalable, fully-managed service including training, hosting, maintenance, monitoring, and security. We ensure the best solution for our partners as we bring together the very best technology on the market together into a flexible and powerful package.

BriefCam and NEC NeoFace perfectly compliment one another in forming the core of a scalable, fully-managed service in Bedroq Seek.

Find out more about each partner below:

NEC Neoface
Reducing the risk of security threats by integrating face matching technology with video analytics

As partners of NEC, Bedroq brings you the best facial recognition technology. The real power of NEC NeoFace lies in its tolerance of poor quality images. With its proven ability to match

low resolution facial images, including images with resolutions down to just 24 pixels between the eyes, highly compressed videos and images can now be usable evidence, leading to higher rates of positive identification.

NEC NeoFace outperforms all other face recognition systems in matching accuracy.

BriefCam

Reduce time-to-target for increased safety and optimised operations

BriefCam Video Analytics is a critical AI-based technology that makes your video searchable, actionable, and quantifiable. Used for enhancing security, improving operational efficiency, and providing business intelligence, BriefCam is widely used in diverse sectors ranging from law enforcement and retail to energy, transportation, and more.

This flexible, best-in-class software solution works with any VMS platform to provide savings across operations, reducing 100 hours of footage to 1 hour or less for easy analysis.
